1 Conventions and Feedback

The following describes the typographical conventions and how to give feedback:

**Typographical conventions**

The following typographical conventions are used:

- `monospace` denotes text that you can enter at the keyboard, such as commands, file and program names, and source code.
- `monospace` denotes a permitted abbreviation for a command or option. You can enter the underlined text instead of the full command or option name.
- `monospace italic` denotes arguments to commands and functions where the argument is to be replaced by a specific value.
- `monospace bold` denotes language keywords when used outside example code.
- `italic` highlights important notes, introduces special terminology, denotes internal cross-references, and citations.
- `bold` highlights interface elements, such as menu names. Denotes signal names. Also used for emphasis in descriptive lists, where appropriate.

**Feedback on this product**

If you have any comments and suggestions about this product, contact your supplier and give:

- Your name and company.
- The serial number of the product.
- Details of the release you are using.
- Details of the platform you are using, such as the hardware platform, operating system type and version.
- A small standalone sample of code that reproduces the problem.
- A clear explanation of what you expected to happen, and what actually happened.
- The commands you used, including any command-line options.
- Sample output illustrating the problem.
- The version string of the tools, including the version number and build numbers.

**Feedback on documentation**

If you have comments on the documentation, e-mail `errata@arm.com`. Give:

- The title.
- The number, DAI0531A.
- If viewing online, the topic names to which your comments apply.
- If viewing a PDF version of a document, the page numbers to which your comments apply.
- A concise explanation of your comments.

ARM also welcomes general suggestions for additions and improvements.
ARM periodically provides updates and corrections to its documentation on the ARM Information Center, together with knowledge articles and Frequently Asked Questions (FAQs).

**Other information**

The ARM Glossary is a list of terms used in ARM documentation, together with definitions for those terms. The ARM Glossary does not contain terms that are industry standard unless the ARM meaning differs from the generally accepted meaning.

2 Overview

2.1 Purpose of this application note

This application note details installation of the uSDCARD SPI Adaptor which provides a user storage device visible to processor SMMs loaded in to the Cortex-M Prototyping System (MPS2+) Motherboard.

2.2 Requirements

To use this adaptor you will require a SPI controller to be implemented in the FPGA design, such as the ARM® SSP primecell, PL022. An example of this can be found in the MPS2+ default SMM, Appnote AN385.

Software access to the SPI interface is supported by the ARM® MBED API libraries.

3 Getting Started

The uSDCARD SPI Adaptor kit should have arrived with the following contents:

1. uSDCARD SPI Adaptor Board
2. PCB spacer, male, 6 mm, M3
3. PCB spacer, female, 11 mm, M3
4. Screw, steel, 6mm, M3
5. 2GB uSD card

The steps below show you how to set up the adapter board on the MPS2+ Motherboard.

1. Remove the plastic spacer, supplied with MPS2+ Motherboard, from the mounting hole (Figure 3-1).

![Figure 3-1 : Plastic spacer removal](image1)

2. Replace them with the two spacers provided with the Adaptor board as shown in Figure 3-2

![Figure 3-2 : Spacers replacement](image2)
3. Plug the adaptor in to J21 of the V2M-MPS2+ motherboard.

![Fit the Adaptor](image)

**Figure 3-3 : Fit the Adaptor**

4. Place the supplied SD card in to the adaptor connector slot and push in then release, possibly repeating until it latches.
